#### Footnotes

**1:** Interpretation:

Samples are reported as "Not Detected" when no amplification is identified.

Samples are reported as "Detected" when detectable amplification is identified. Samples with CP values of < 40 are considered Detected.

Samples are "Invalid" when inhibitors present in the sample prevent RNA amplification during testing. This result is only reported after 2 attempts at extracting and testing the sample have failed. This sample should be recollected and submitted to AHL for retesting.

**Notice:** Results relate only to the sample as received and the portion of sample tested. Collection date, Associated Parties, and animal identification, taxonomy, gender, and age are provided by the client. AHL is not responsible for client provided information which could affect the validity of results.
